(54) **Increased moisturization efficacy using hydroxyalkylurea**

(57) A personal care composition having at least one hydroxyalkylurea (HAU) optionally in combination with at least one other moisturizing agent. The at least one HAU, alone or together with the at least one moisturizing agent, provides not only the perception of moisturization, but also actual increased moisturization efficacy. When the two are used in combination in a personal care composition, they are provided in a synergis-

tically moisturizing effective ratio to provide that perception of moisturization and increased moisturization efficacy. Such personal care compositions provide an enhanced smooth feel as well as enhanced flexibility, elasticity, suppleness and firmness without leaving a heavy or greasy feel.

**EP 1 535 607 A1**

**BEST AVAILABLE COPY**

## Description

[0001] The present invention relates to personal care compositions. More specifically, the present invention relates to personal care compositions that use hydroxyalkylurea for providing improved moisturization efficacy. In another aspect, the present invention relates to personal care compositions that use hydroxyalkylurea in combination with other moisturizing agents in a synergistically moisturizing effective ratio, thereby providing increased moisturization efficacy.

[0002] A significant segment of the global population uses products to moisturize their skin and hair, and such segment continues to grow at a substantial rate. Unfortunately, many of these products do not actually moisturize. Instead, they simply give the appearance of moisturization by reducing fine lines and/or flaking and adding shine. When trying to provide or increase moisturizing efficacy, many of the moisturizing products currently on the market also leave a heavy, greasy feel that consumers find undesirable.

[0003] The use of hydroxyalkylurea in personal care compositions is known in the art. For example, U.S. Patent No. 5,858,549 discloses compositions that utilize hydroxyalkylurea crosslinking agents on natural or synthetic substrates or in the preparation of coatings. Hydroxyalkyl ureas are also used in thermosetting binders (see, e.g., U.S. Patent No. 6,140,388), in personal care products and detergent compositions (see, e.g., U.S. Patent No. 5,880,076 and German Patent No. 27 03 185). However, none of these patents disclose the use of hydroxyalkylurea either alone or in combination with other moisturizing agents to increase the moisturizing efficacy of personal care compositions.

[0004] Accordingly, there is a need for personal care compositions with improved moisturizing efficacy.

[0005] It has now been found that personal care compositions that include hydroxyalkyl urea alone or in combination with other moisturizing agents provide not only the perception of moisturization, but also actual increased moisturization efficacy. Such personal care compositions provide an enhanced smooth feel as well as enhanced flexibility, elasticity, suppleness and firmness without leaving a heavy, tacky or greasy feel.

[0006] The present invention relates to a personal care composition having at least one hydroxyalkylurea optionally in combination with at least one other moisturizing agent, which provides not only the perception of moisturization, but also actual increased moisturization efficacy. Such personal care compositions provide an enhanced smooth feel as well as enhanced flexibility, strength, elasticity, suppleness and firmness without leaving a heavy, tacky or greasy feel.

[0007] When provided together in a personal care formulation, the hydroxyalkylurea and the moisturizing agent are present in a synergistically moisturizing effective ratio. In one aspect, the ratio of hydroxyalkyl urea to moisturizing agent is at least about 0.5:15.0 and no more than about 15.00:0.05. In another aspect, the ratio of hydroxyalkyl urea to moisturizing agent is at least about 1:5 and no more than about 5:1. In one embodiment, the hydroxyalkyl urea is N-2-hydroxyethyl urea. The amount of hydroxyalkyl urea is found in the personal care composition is present in an amount of from about 0.5% to 15.0% by weight of the composition. In another aspect, the hydroxyalkyl urea is present in an amount of from about 1 to 8% by weight of the personal care composition.

[0008] Moisturizers useful in personal care compositions that provide the improved moisturization efficacy when used in combination with hydroxyalkylurea include petrolatum, mineral and vegetable oils, lanolins, glycerin, sorbitol, polyols, urea, lactic acid, lactates, sugars, alpha hydroxy acids, beta hydroxy acids, sodium hyaluronate, hyaluronic acid, pyrrolidone carboxylic acid. The moisturizer(s) can be present in an amount of from about 0.5% to 15% by weight of the personal care composition. In another aspect, the moisturizer is present in an amount of from about 1% to 10% by weight of the personal care composition. In even another aspect, the moisturizer is present in an amount of from about 2% to about 6% by weight of the personal care composition.

[0009] In one embodiment of the present invention, the hydroxyalkylurea is N-2-hydroxyethylurea and the moisturizer is selected from the group consisting of petrolatum, mineral and vegetable oils, lanolins, glycerin, sorbitol, polyols, urea, lactic acid, lactates, sugars, alpha hydroxy acids, beta hydroxy acids, sodium hyaluronate, hyaluronic acid, pyrrolidone carboxylic acid, and combinations thereof.

[0010] Personal care compositions according to the present invention can include, e.g., skin care compositions, hair products and conditioners. Hair products according to the present invention can include, e.g., hair gel, hair lotion, hair cream, mousse, shampoo, conditioner and hair spray. Conditioners according to the present invention can include, e.g., leave-on conditioners, including leave-on hair and skin conditioners.

[0011] The present invention also relates to a personal care composition having at least one hydroxyalkyl urea and at least one ammonium salt, wherein the hydroxyalkyl urea and the ammonium salt are present in a synergistically moisturizing effective ratio.

[0012] In addition to the above compositions, the present invention provides a process for preparing such compositions. This process includes reacting at least one ethanolamine with urea to form hydroxyalkyl urea. Any residual ammonia is neutralized with a cosmetically suitable acid to form an ammonium salt. The cosmetically suitable acid includes, e.g., lactic acid, glycolic acid, citric acid, maleic acid, acetic acid, salicylic acid and combinations thereof.

[0013] In another aspect, the present invention provides for a hair moisturizing composition having at least one hydroxyalkylurea.

[0014] The terms below have the following meanings as used herein -

[0015] The term "surfactant" means an ingredient that is used in a cosmetic formulation and exhibits the ability to reduce the interfacial tension between two immiscible substances, wets skin and hair surfaces, emulsifies or solubilizes oils, and/or suspends soil and is meant to include amphoteric, anionic, cationic, and nonionic surfactants.

[0016] The term "mousse" means a personal care product in which the ingredients foam when dispensed from their container without any mechanical action from the user except possibly the shaking of the product in the container prior to actuation of a valve and subsequent dispensing of the internal contents by actuation.

[0017] The term "shampoo" means a cleansing product containing surfactants that is massaged into wet hair, usually thereby creating foam, which is then rinsed from the hair with water, removing at least some soil and/or oils from the hair.

[0018] The term "hair lotion" means a composition below 20,000 centipoise at 25° Celsius (°C) and standard pressure that is applied to hair to provide a cosmetic benefit.

[0019] The term "hair cream" means a composition equal to or greater than 20,000 centipoise at 25°C and standard pressure that is applied to the hair to provide a cosmetic benefit.

[0020] The term "cosmetic benefit" includes, but in no way is limited to, such benefits as moisturizing, sun protection, fragrance, wrinkle reduction, and tanning.

[0021] Figure 1 depicts the relative skin moisture content of the synergy between hydroxyalkyl urea and ammonium lactate at a ratio of 5.00:0.05.

[0022] Figure 2 depicts the relative skin moisture content of the synergy between hydroxyalkylurea and ammonium lactate at a ratio of 1:1.

[0023] Figure 3 depicts the relative skin moisture content of the synergy between hydroxyalkylurea and sorbitol at a ratio of 1:1.

[0024] The present invention relates to a personal care composition comprising at least one hydroxyalkyl urea optionally in combination with at least one other moisturizing agent, which provides not only the perception of moisturization, but also actual increased moisturization efficacy. Such personal care compositions provide an enhanced smooth feel as well as enhanced flexibility, strength, elasticity, suppleness and firmness without leaving a heavy or greasy feel.

[0025] Hydroxyalkyl ureas, as used herein, are derived from urea and are of the general formula:

wherein R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> and R<sup>4</sup> each independently represent hydrogen, a C<sub>1-4</sub> alkyl or a C<sub>2-6</sub> hydroxyalkyl group that can contain from 1 to 5 hydroxyl or hydroxyalkyl groups providing that at least one of the radicals R<sup>1</sup>-R<sup>4</sup> is a hydroxyalkyl or oligohydroxyalkyl group. An example of a particularly useful hydroxyalkylurea is N-2-hydroxyethylurea having the structure -

[0026] Personal care compositions according to the present invention can also include at least one moisturizing agent. Such moisturizing agents are known in the art and include without limitation occlusion compounds such as petrolatum, mineral oils, vegetable oils, triglycerides, lanolins and their derivatives, unsaturated fatty acids and their derivatives, silicones, and some emollients; humectants such as glycerin, sorbitol, lactates (including, but not limited to sodium, ammonium, and potassium salts), polyols (e.g., propylene glycol), polyethylene glycol (PEG 200-600), and Sorbeth-30; natural moisturizing factors (NMFs) such as urea, lactic acid, and sodium pyrrolidone carboxylic acid (NaPCA); liposomes, natural and vegetal moisturizing agents such as glycerin, serine, chitosan PCA, sodium hyaluronate, hyaluronic acid, microsponges, soluble collagen, modified protein, sugars, monosodium L-glutamate, lecithins and phospholipids and their derivatives; α- and β-hydroxy acids such as glycolic acid, lactic acid, citric acid, maleic acid and salicylic acid; polymeric moisturizers such as polysaccharides and their derivatives such as modified starch, xanthan gum and dehydroxanthan gum, polyacrylates, and polyquaternium-4, -10 and -51; and amino acids such as glutamic acid, aspartic acid, and lysine. As used herein, all acids are intended to include the salts thereof. Particularly suitable moisturizers are petrolatum, mineral and vegetable oils, lanolin, glycerin, sorbitol, polyols, urea, lactic acid,

lactates (including but not limited to sodium, ammonium, and potassium salts),  $\alpha$ - and  $\beta$ -hydroxy acids, sodium hyaluronate, hyaluronic acid, sugars, and pyrrolidone carboxylic acid (PCA).

[0027] The personal care composition can also include other optional ingredients found in such formulations that are commonly used in the industry. These can vary greatly depending upon the type of composition (e.g., skin care or hair care) and the functionality and properties desired. Without limitation, these components include emulsifiers, aesthetic modifiers, UV filters, humectants, moisturizers, emollients, solvents, chelating agents, vitamins, antioxidants, botanical extracts, pH adjusting and neutralizing agents, polymers, surfactants or soaps, thickeners, preservatives, fragrances, active ingredients (such as anti-aging agents, firming or toning agents, etc.), dyes and pigments.

[0028] The hydroxyalkyl urea of the present invention is compatible with most other components used in conventional personal care compositions. For example, cosmetic compositions may contain one or more other components such as moisturizers, UV filters (both organic and inorganic UV actives), conditioning agents, emulsifiers, pH adjusters and neutralizers, emollients, solvents, antioxidants, vitamins, styling agents, chelating agents, preservatives and fragrances. Skin care and cosmetic compositions can also contain at least one component selected from the group consisting of vitamins, anti-aging agents, moisturizers, emollients, emulsifiers, surfactants, opacifiers, foaming agents, preservatives, antioxidants, pigments, dyes and active ingredients.

[0029] In one aspect, the hydroxyalkyl urea of the present invention is present in a moisturizing effective amount. Understandably, this amount can vary depending any number of factors, for example, the type and amount of other moisturizing agents and the type of personal care composition in which it is included. In one aspect, the hydroxyalkyl urea is present in an amount of from about 0.25 to about 15.0% by weight of the personal care composition. In another aspect, the hydroxyalkyl urea is present in an amount of about 1 to about 8% by weight of the composition. In one aspect, the hydroxyalkyl urea is present in an amount of about 1.5 to about 5% by weight of the personal care composition.

[0030] In another embodiment, a moisturizing agent is present with the hydroxyalkyl urea in a moisturizing effective amount. This amount can vary depending upon a variety of factors such as the type of moisturizing agent, the amount of hydroxyalkyl urea, and the type of personal care composition in which it is to be included. In one embodiment, the moisturizing agent is present in an amount of from about 0.002 to about 15% by weight of the personal care composition. In another embodiment, the moisturizing agent is present in amount of from about 0.1 to about 10% by weight of the personal care composition. In one embodiment, the moisturizing agent is present in an amount of from about 0.5 to about 6% by weight of the personal care composition.

[0031] When the hydroxyalkyl urea is used in combination with a moisturizing agent according to one embodiment of the present invention, the ratio of hydroxyalkyl urea to moisturizing agent is preferably in a synergistically moisturizing effective ratio. In one embodiment, the ratio is between about 0.25:0.00 and about 20.0:0.0 hydroxyalkyl urea to moisturizing agent. In one embodiment, the ratio is between about 0.5:15.0 and about 15.0:0.05 hydroxyalkyl urea to moisturizing agent. In another embodiment, the hydroxyalkyl urea to moisturizing agent ratio is between about 1:5 and about 15.00:0.05. In another embodiment, the ratio is between about 0.5:15.0 and about 5:1 hydroxyalkyl urea to moisturizing agent. In another embodiment, the hydroxyalkyl urea:moisturizing agent ratio is between about 1:5 and about 5:1.

[0032] This combination of hydroxyalkyl urea and moisturizer produces a synergistic relative moisturization efficacy. Thus, the combination has an increased moisturization efficacy over that expected, even more than the added moisturization efficacy of the individual components alone.

[0033] Methods of manufacturing hydroxyalkyl ureas are known in the art. One known method is by reacting at least one ethanolamine with urea (1:1 molar concentrations) at elevated temperatures of about 80°C to 200°C with adequate sparging. Using this method, residual levels of about 0.1 to 1% ammonia are typically produced and remain in solution. The ammonia can be neutralized with any cosmetically suitable acid to form an ammonium salt. This ammonium salt and hydroxyalkylurea also produce a synergistic moisturization efficacy. Particularly suitable acids include lactic acid, glycolic acid, citric acid, maleic acid, acetic acid, and salicylic acid.

[0034] Personal care compositions include without limitation skin moisturizing lotions and creams including for the face and body, moisturizing cleansers and soaps, anti-aging products, nourishing creams and lotions, firming and toning products, shaving creams, deodorants, color cosmetics including foundations, makeups, and lipsticks, sun care products such as sunscreens, suntan lotions, and after-sun products, hair conditioners and cream rinses, and shampoos, hair styling products including hairsprays, gels, and mousses, personal care wipes, baby care products, hair dyes, hair permanent wave, anti-frizz, volumizing, and bath and shower products. Particularly suitable compositions are skin care compositions.

[0035] The personal care compositions comprising both hydroxyalkylurea and moisturizer not only have improved moisturization efficacy, but also provide improved aqueous and emulsion freeze-thaw stability. Further, such compositions have a non-tacky, nongreasy feel when applied.

## EXAMPLES

[0036] The following examples are presented to further illustrate and explain the present invention and should not be taken as limiting in any regard. All percentages used are on a weight/weight basis.

In the examples below, the following procedures/tests are used -

[0037] Skin Moisturization (Hydration). Aqueous solutions (along with formulated lotions) were applied to the volar forearm of panellists with dry skin. Solutions tested contained between 2.5 and 15% active levels of Hydroxyalkylurea and various moisturizing agents. The various individual moisturizing agents were also used in combination with Hydroxyalkylurea and the relative moisture contents in the skin were compared.

[0038] Moisture levels were measured using a Corneometer® CM 825 (available from CK Industries) prior to and at various time intervals after application of forty microliters of each sample (Temperature ~21°C, Relative Humidity ~35%).

[0039] Hair Moisturization. Moisture retention/uptake on hair was determined using two test methods - a 'Dynamic Vapor Sorption' (DVS) technique and a 'Controlled Humidity Hair Moisturization Analysis'. 50% active aqueous solutions were applied to hair in both test methods.

[0040] In the Controlled Humidity Hair Moisturization Analysis, moisture uptake and retention of the different test samples were compared using hair swatches weighing approximately 4 grams and measuring 1.27 cm in width and 25.4 cm in length. Each test sample solution was evaluated in triplicate. An initial weight ( $w_i$ ) was taken for each swatch. Next, the swatches were soaked for 1 hour in 30 ml of the test solution (50% active). After removal from the test solution, excess product was squeezed off using the analyst's thumb and forefinger and then reweighed ( $w_{wet}$ ). The swatches were then dried in a 49°C oven for 1.5 hours and weighed ( $w_{dry}$ ) again. The weight of active deposited on the hair after the water has evaporated ( $w_{active}$ ) is the difference between  $w_i$  and  $w_{dry}$ .

[0041] In order to ensure removal of all moisture from the samples, the treated hair swatches were then placed in a vacuum oven at 45°C and -100 kPa (-30 mmHg) for 20 hours. After drying, the swatches were hung on curl retention boards and placed in a humidity chamber at 37°C and 85% relative humidity for 20 hours. The swatches were reweighed ( $w_{HH}$ ) when removed from the humidity chamber. The difference between  $w_i$  and  $w_{HH}$  is the weight of moisture gained in the humidity chamber ( $w_{HC}$ ) plus the weight of moisturizing active on the hair. The percent total weight gained ( $w_{tot}$ ) is obtained by multiplying the quantity  $w_{HC}$  divided by  $w_i$  by 100.

[0042] After determination of the total weight gained, the swatches are returned to the vacuum oven at the same conditions given above for another 20 hours, then removed and weighed ( $w_{final}$ ) for a final time. The difference between  $w_{HH}$  and  $w_{final}$  is the weight of moisture gained in the humidity chabinet ( $w_{moist}$ ). The percent moisture gained is determined by multiplying by 100 the quantity  $w_{moist}$  divided by  $w_i$ .

[0043] Moisture uptake was also determined using a Surface Measurement Systems Dynamic Vapor Sorption Analyzer 2000 (DVS). The testing was run on blonde damaged hair. The procedure used was as follows -

[0044] Approximately 0.3 - 0.4 grams of hair were weighed. About 11 grams of the 50% solution was added to a weigh boat. The weight of hair was then soaked in the solution in the weigh boat for an hour, and then dried in a 49°C oven for 40 minutes. The hair sample was then wrapped around a small pre-weighed paperclip and put onto a microbalance in the DVS instrument test chamber. The instrument then brought the conditions in the test chamber to 85% relative humidity and 37°C over 30 minutes. Once this target humidity was reached, it was held for 20 hours. The percent moisture uptake is equal to the percent increase in weight of the hair and was determined after 4 and 20 hours.

Example 1 -

[0045] Hydroxyethyl urea (HAU) and the moisturizing agent ammonium lactate (Amm. Lactate), were analyzed alone and in combination. Active levels used for the individual agents were HAU at 5% and ammonium lactate at 0.05%. The combination consisted of a total of 5% moisturizing ingredients at a ratio of 5:0.05 of HAU:ammonium lactate. Figure 1 shows the relative skin moisture content initially and at 5 minutes, 15 minutes, 1hour, 2hours, and 4hours after application. From Figure 1 it is seen that the blend provides a significant increase in moisture over either individual moisturizing agent alone.

[0046] In another study the active levels used for each individual agent were 5% HAU and 5% ammonium lactate, while the combination consisted of a total of 5% moisturizing ingredients at a ratio of 1:1 HAU to ammonium lactate. Figure 2 shows the relative skin moisture content initially and at 5 minutes, 15 minutes, 1hour, 2hours, and 4hours after application. Once again, the blend provides a significant increase in moisture over either individual moisturizing agent.

Example 2 -

[0047] Hydroxyethylurea and the moisturizing agent glycerin were analyzed alone and in combination. Active levels

used for the individual agents were HAU at 15% and glycerin at 15%. The combination consisted of a total of 15% total moisturizing ingredients at a ratio of 1:1 of HAU:glycerin. Table 1 below shows the relative skin moisture content, initially and at 5 minutes, 15 minutes, 1 hour, and 2 hours after application. The blend showed a significant increase in moisture over either individual moisturizing agent.

**Table 1 – Relative Skin Moisture Content**

**Synergy of HAU / Glycerin (1:1) at 15% Active**

	Initial	5 min	30 min	1 hr	2 hr
Baseline		46.75	46.75	46.75	46.75
HAU		56.56	60.00	62.95	62.00
Glycerin		52.50	53.50	55.38	48.75
Blend (1:1)		88.25	73.00	71.25	70.00

**Example 3 -**

[0048] Hydroxyethylurea and the moisturizing agent sorbitol were analyzed alone and in combination. Active levels used for the individual agents were HAU at 15% and Sorbitol at 15%. The combination consisted of a total of 15% total moisturizing ingredients at a ratio of 1:1 of HAU:Sorbitol. Figure 3 illustrates the relative skin moisture content initially and at 5 minutes, 15 minutes, 1 hour, and 2 hour after application. From Figure 3 it is seen that the blend provides a significant increase in moisture over either individual moisturizing agent, especially after 4 hours time.

**Example 4 -**

[0049] Hydroxyethylurea combined with ammonium lactate was compared to glycerin and a water blank for moisturization of hair. Active levels used for the test solutions were as follows: HAU and ammonium lactate together at 49% and 1%, respectively, glycerin at 50%, and the blank at 0%. Table 2 below provides the percent moisture uptake measured by DVS on hair after 4 and 20 hours.

Table 2 -

Percent moisture uptake by DVS analysis		
Product	4 Hour @ 85% RH	20 Hour @85% RH
Hydroxyethylurea and ammonium lactate	18.72%	47.65%
Glycerin	22.10%	44.58%
Blank (Water)	13.58%	14.53%

Comparing the results of the hydroxyethylurea/ammonium lactate sample to the glycerin and blank samples in Table 2 shows that hydroxyethylurea is superior to the blank and similar or better than glycerin for bringing moisture to hair over time.

**Example 5 -**

[0050] A 49:1 blend of hydroxyethylurea (HAU) and ammonium lactate was compared to glycerin and a blank in the Controlled Humidity Hair Moisturization Analysis test described in Example 1. The results for % moisture gained are listed in Table 3 below.

Table 3:

% Total Moisture Gained	
Sample	% Moisture Gained
HAU and ammonium lactate	37.31

Table 3: (continued)

% Total Moisture Gained	
Sample	% Moisture Gained
Glycerin	38.23
Blank	12.48

The results in Table 3 illustrate the moisturization benefits of the HAU/ammonium lactate blend. The blend performs similarly to glycerin and superior to the blank for moisturization.

#### Example 6 -

[0051]

CLEAR CONDITIONING SHAMPOO FORMULA			
Ingredients	INCI Designation	% W/W	Supplier
CELQUAT SC-230M	Polyquaternium-10	0.25	National Starch
Hydroxyethylurea	Not applicable	3.00	National Starch
Ammonium Lactate	Ammonium Lactate	0.06	
Deionized Water	Water (Aqua)	18.18	
Standapol ES-2	Sodium Lauryl Sulfate	33.33	Cognis Corp.
Standapol ES-3	Sodium Laureth Sulfate	30.00	Cognis Corp.
Dehyton K	Cocamidopropyl Betaine	10.00	Cognis Corp.
Promodium CO	Polypropoxyethoxycocamide	3.18	Uniqema
Germaben II	Diazolidinyl Urea, Propylene Glycol, Methylparaben, Propylparaben	1.00	Sutton Laboratories
Sodium Chloride	Sodium Chloride	1.00	J. T. Baker
Citric Acid	Citric Acid	q.s.	
		100.00	

#### PROCEDURE

[0052] CELQUAT SC-230M is dissolved in water by sifting into water slowly while mixing. In a separate vessel, all remaining ingredients are combined in the order listed above. The formulation is mixed until homogeneous after each addition. When both phases are homogeneous, the CELQUAT SC-230M phase is slowly added to the surfactant phase. The combined phases are then mixed with moderate agitation until homogeneous.

#### Example 6a -

[0053] Example 6 is repeated with, in place of hydroxyethylurea, any one of the following hydroxyalkyl-substituted ureas: *N*-(2-hydroxypropyl), *N*-(3-hydroxypropyl), *N*-(2,3-dihydroxypropyl), *N*-(2-hydroxybutyl), *N*-(3-hydroxypropyl), *N*-(4-hydroxybutyl), *N*-(2,3-dihydroxybutyl), *N*-(2,4-dihydroxybutyl), *N*-(3,4-dihydroxybutyl), *N*-ethyl-*N*-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*-propyl, *N,N*-bis-(2-hydroxypropyl)-*N*-(2-hydroxyethyl), *N*-tert.-butyl-*N*-(2-hydroxyethyl)-*N*-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N,N*-dimethyl, *N,N,N,N*-tetrakis-(2-hydroxyethyl), and *N,N*-bis(2-hydroxyethyl)-*N,N*-bis-(2-hydroxypropyl) urea.

		100.00	

## PROCEDURE

45

[0055] The Carbopol is slowly sifted into the mixing vortex until completely dispersed. While maintaining good agitation, the Natrosol HHR is then slowly sifted in. Once dispersed, both the AMAZE and the CELQUAT H-100 is sifted in. When the solution is complete, the TEA is added. The ingredients in Part B are then added and mixed until homogeneous. Filter and fill aerosol containers. For Part C, charge with propellant.

40

## PROCEDURE

45

[0058] Dissolve STRUCTURE ZEA into the water at room temperature. Add CELQUAT L-200 and heat to 80°C while mixing (Phase B). In a separate vessel, combine Phase A and heat to 80°C. Add Phase B to Phase A with agitation. Add Phase C while maintaining temperature (80°C). Continue mixing and cool to 45°C. Add Phase D and adjust pH, if necessary.

## Example 8a -

50

55

[0059] Example 8 is repeated with, in place of hydroxyethylurea, any one of the following hydroxyalkyl-substituted ureas: *N*-(2-hydroxypropyl), *N*-(3-hydroxypropyl), *N*-(2,3-dihydroxypropyl), *N*-(2-hydroxybutyl), *N*-(3-hydroxypropyl), *N*-(4-hydroxybutyl), *N*-(2,3-dihydroxybutyl), *N*-(2,4-dihydroxybutyl), *N*-(3,4-dihydroxybutyl), *N*-ethyl-*N*-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*-propyl, *N,N*-bis-(2-hydroxypropyl)-*N*-(2-hydroxyethyl), *N*-tert.-butyl-*N*-(2-hydroxyethyl)-*N*-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N,N*-dimethyl, *N,N,N,N*-tetrakis-(2-hydroxyethyl), and *N,N*-bis(2-hydroxyethyl)-*N,N*-bis-(2-hydroxypropyl) urea.

Glydant	DMDM Hydantoin	1.00	Lonza
Hydroxyethylurea	Hydroxyethylurea	3.00	
Ammonium Lactate	Ammonium Lactate	0.06	
Fragrance	Fragrance (Perfume)	q.s.	
		100.00	

## PREPARATION

**[0064]** Prepare Phase A by dispersing and dissolving CELQUAT L-200 in water using good agitation. Mix until solution is clear and homogenous. Add dl-Panthenol and allow to completely dissolve. Prepare Phase B by adding TEA to water and mix well. Add Neo Heliopan and mix until clear. Follow with DC 929 cationic emulsion. Combine parts by adding Phase B to Phase A. Mix well and continue to mix for approximately 15 minutes. Add Solu-silk and mix well. Add Versene 100, Glydant, hydroxyethylurea, ammonium lactate, and fragrance, mixing well after each addition.

### Example 10a -

**[0065]** Example 10 is repeated with, in place of hydroxyethylurea, any one of the following hydroxyalkyl-substituted ureas: *N*-(2-hydroxypropyl), *N*-(3-hydroxypropyl), *N*-(2,3-dihydroxypropyl), *N*-(2-hydroxybutyl), *N*-(3-hydroxypropyl), *N*-(4-hydroxybutyl), *N*-(2,3-dihydroxybutyl), *N*-(2,4-dihydroxybutyl), *N*-(3,4-dihydroxybutyl), *N*-ethyl-*N*-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*-propyl, *N,N*-bis-(2-hydroxypropyl)-*N*-(2-hydroxyethyl), *N*-tert.-butyl-*N*-(2-hydroxyethyl)-*N*-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N,N*-dimethyl, *N,N,N,N*-tetrakis-(2-hydroxyethyl), and *N,N*-bis(2-hydroxyethyl)-*N,N*-bis-(2-hydroxypropyl) urea.

### Example 11 -

**[0066]**

Phase C			
Glycolic Acid (70%)	Glycolic Acid	0.45	
Phase D			
Florabeads	Jojoba Esters	0.80 100.00	Floratech

**PROCEDURE**

[0067] Polyquaternium-4 is dissolved in water with mixing. The remaining ingredients of Phase A are sequentially added with continued mixing. Phase B is combined and then added to Phase A. Continue to mix while slowly adding glycolic acid to Phase AB, taking care to avoid entrapped air. Finally, add beads slowly while mixing.

Example 11a -

[0068] Example 11 is repeated with, in place of hydroxyethylurea, any one of the following hydroxyalkyl-substituted ureas: *N*-(2-hydroxypropyl), *N*-(3-hydroxypropyl), *N*-(2,3-dihydroxypropyl), *N*-(2-hydroxybutyl), *N*-(3-hydroxypropyl), *N*-(4-hydroxybutyl), *N*-(2,3-dihydroxybutyl), *N*-(2,4-dihydroxybutyl), *N*-(3,4-dihydroxybutyl), *N*-ethyl-*N*-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*-propyl, *N,N*-bis-(2-hydroxypropyl)-*N*-(2-hydroxyethyl), *N*-tert.-butyl-*N*-(2-hydroxyethyl)-*N*-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*,*N*-dimethyl, *N,N,N,N*-tetrakis-(2-hydroxyethyl), and *N,N*-bis(2-hydroxyethyl)-*N*,*N*-bis-(2-hydroxypropyl) urea.

CLEAR CONDITIONING SHAMPOO FORMULA			
Ingredients	INCI Designation	% W/W	Supplier
	Propylparaben	1.00	Sutton Laboratories
Sodium Chloride	Sodium Chloride	1.00	J. T. Baker
Citric Acid	Citric Acid	q.s.	
		100.00	

## PROCEDURE

[0082] CELQUAT SC-230M is dissolved in water by sifting into water slowly while mixing. In a separate vessel, all remaining ingredients are combined in the order listed above. The formulation is mixed until homogeneous after each addition. When both phases are homogeneous, the CELQUAT SC-230M phase is slowly added to the surfactant phase. The combined phases are then mixed with moderate agitation until homogeneous.

## Example 16a -

[0083] Example 16 is repeated with, in place of hydroxyethylurea, any one of the following hydroxyalkyl-substituted ureas: *N*-(2-hydroxypropyl), *N*-(3-hydroxypropyl), *N*-(2,3-dihydroxypropyl), *N*-(2-hydroxybutyl), *N*-(3-hydroxypropyl), *N*-(4-hydroxybutyl), *N*-(2,3-dihydroxybutyl), *N*-(2,4-dihydroxybutyl), *N*-(3,4-dihydroxybutyl), *N*-ethyl-*N'*-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N'*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxypropyl), *N,N'*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N'*-propyl, *N,N*-bis-(2-hydroxypropyl)-*N'*-(2-hydroxyethyl), *N*-tert.-butyl-*N'*-(2-hydroxyethyl)-*N'*-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N'*,*N'*-dimethyl, *N,N,N',N'*-tetrakis-(2-hydroxyethyl), and *N,N*-bis(2-hydroxyethyl)-*N,N'*-bis-(2-hydroxypropyl) urea.

## Example 17 -

[0084]

LEAVE-IN CONDITIONER FORMULA			
Ingredients	INCI Designation	% W/W	Supplier
<b>Phase A</b>			
CELQUAT® L-200	Polyquaternium-4	0.30	National Starch
Deionized Water	Water (Aqua)	48.06	
dl-Panthenol	Panthenol	0.50	Tri-K Industries
<b>Phase B</b>			
Deionized Water	Water (Aqua)	44.79	Haarmann & Reimer
TEA	Triethanolamine	0.20

Glydant	DMDM Hydantoin	0.20	Lonza
Phenonip	Phenoxyethanol (and) Methylparaben (and) Ethylparaben (and) Butylparaben (and) Propylparaben (and) Isobutylparaben	0.15	
Hydroxyethylurea	Hydroxyethylurea	3.00	
Phase E			
Citric acid (10%)	Citric Acid	q.s. pH 4.0-5.0 100.00	

## PROCEDURE

[0088] Dissolve STRUCTURE ZEA into the water at room temperature. Add CELQUAT L-200 and heat to 80°C while mixing (Phase B). In a separate vessel, combine Phase A and heat to 80°C. Add Phase B to Phase A with agitation. Add Phase C while maintaining temperature (80°C). Continue mixing and cool to 45°C. Add Phase D and adjust pH, if necessary.

## Example 18a -

[0089] Example 18 is repeated with, in place of hydroxyethylurea, any one of the following hydroxyalkyl-substituted ureas: *N*-(2-hydroxypropyl), *N*-(3-hydroxypropyl), *N*-(2,3-dihydroxypropyl), *N*-(2-hydroxybutyl), *N*-(3-hydroxypropyl), *N*-(4-hydroxybutyl), *N*-(2,3-dihydroxybutyl), *N*-(2,4-dihydroxybutyl), *N*-(3,4-dihydroxybutyl), *N*-ethyl-*N*-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxyethyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*-propyl, *N,N*-bis-(2-hydroxypropyl)-*N*-(2-hydroxyethyl), *N*-tert.-butyl-*N*-(2-hydroxyethyl)-*N*-(2-hydroxypropyl), *N,N*-bis-(2-hydroxyethyl)-*N*,*N*-dimethyl, *N,N,N,N*-tetrakis-(2-hydroxyethyl), and *N,N*-bis(2-hydroxyethyl)-*N,N*-bis-(2-hydroxypropyl) urea.

## Claims

1. A personal care composition comprising:

at least one hydroxyalkyl urea, and  
at least one moisturizing agent,

wherein the hydroxyalkyl urea and the moisturizing agent are present in a synergistically moisturizing effective ratio.

2. The composition of claim 1, wherein the ratio of hydroxyalkyl urea to moisturizing agent is at least 0.5:15.0 and no more than 15.00:0.05.

3. The composition of claim 1, wherein the hydroxyalkyl urea is *N*-2-hydroxyethylurea.

4. The composition of claim 1, wherein the hydroxyalkyl urea is present in an amount of from 0.5% to 15.0% by weight of the personal care composition.

5. The composition of claim 1, wherein the moisturizer is selected from the group consisting of petrolatum, mineral and vegetable oils, lanolins, glycerin, sorbitol, polyols, urea, lactic acid, lactates, sugars, alpha hydroxy acids, beta hydroxy acids, sodium hyaluronate, hyaluronic acid, pyrrolidone carboxylic acid.

6. The composition of claim 1, wherein the moisturizer is present in an amount of from 0.5% to 15% by weight of the personal care composition.

7. The composition of claim 1, wherein the hydroxyalkylurea is *N*-2-hydroxyethyl urea and the moisturizer is selected from the group consisting of petrolatum, mineral and vegetable oils, lanolins, glycerin, sorbitol, polyols, urea, lactic acid, lactates, sugars, alpha hydroxy acids, beta hydroxy acids, sodium hyaluronate, hyaluronic acid, pyrrolidone carboxylic acid, and combinations thereof.

8. The composition of claim 1 wherein the composition is selected from the group consisting of skin care compositions, hair products and conditioners.

9. The composition of claim 8 wherein the composition is a hair product and the hair product is selected from the group consisting of hair gel, hair lotion, hair cream, mousse, shampoo, conditioner and hair spray.

10. The composition of claim 8 wherein the composition is a conditioner and the conditioner is a leave-on conditioner.

11. The composition of claim 8 wherein the composition is a conditioner and the conditioner is a hair or skin conditioner.

12. A personal care composition comprising:

at least one hydroxyalkyl urea; and  
at least one ammonium salt,

5

wherein the hydroxyalkyl urea and the ammonium salt are present in a synergistically moisturizing effective ratio.

13. A process for preparing the composition of claim 12 comprising:

10

reacting at least one ethanolamine with urea to form hydroxyalkylurea; and  
neutralizing residual ammonia with a cosmetically suitable acid to form an ammonium salt.

14. The process according to claim 13 wherein the cosmetically suitable acid is selected from the group consisting of  
lactic acid, glycolic acid, citric acid, maleic acid, acetic acid, salicylic acid and combinations thereof.

15

15. A hair moisturizing composition comprising at least one hydroxyalkylurea.

**BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ BLACK BORDERS
- ☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
- ☐ ~~FADED~~ TEXT OR DRAWING
- ☒ BLURRED OR ILLEGIBLE TEXT OR DRAWING
- ☐ SKEWED/SLANTED IMAGES
- ☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS
- ☐ GRAY SCALE DOCUMENTS
- ☐ LINES OR MARKS ON ORIGINAL DOCUMENT
- ☐ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
- ☐ OTHER: \_\_\_\_\_

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.**
